# 1. Context

## 1.1. About the company

Fantasy Sport SW is a company with 10-year experience in mobile and web development, with offices in Montreal, Sao Paulo and Rio de Janeiro. It has a team of 50 developers with experience in HTML, CSS, Java, PHP, React, Agile methodologies, and for this project, it also counts with the help of 5 professionals specialized in the niche sports.

The founders of the company have deep ties to niche sports, which gives the company an edge on the sports landscape.

## 1.2. Daily Fantasy Sports (DFS)

Daily Fantasy Sports are a subset of fantasy sport games. As with traditional fantasy sports games, players compete against others by building a team of professional athletes from a particular league or competition while remaining under a salary cap, and earn points based on the actual statistical performance of the players in real-world competitions. Daily fantasy sports are an accelerated variant of traditional fantasy sports that are conducted over short-term periods, such as a week or single day of competition, as opposed to those that are played across an entire season. Daily fantasy sports are typically structured in the form of paid competitions typically referred to as a "contest"; winners receive a share of a predetermined pot funded by their entry fees. A portion of entry fee payments go to the provider as rake revenue.

## 2. Product

We are developing a new software focused on fantasy sports, in particular niche sports called Connect Sports.

### 2.1. What

Connect Sports is aimed to fill this gap and bring leagues and fans closer together. Our solution will bring the DFS concept to fans from sports that are considered niche (smaller fanbase), with lower financial potential. It will include stats information, forums and aggregate news on players, teams and leagues, becoming virtually a one-stop shop for sports fans. By creating an engaging product that appeals to fans from several sports in one place, we believe that we can rake in a relevant customer base that will be closer to the customer base of traditional sports DFS services. This will result in increased commercial opportunities for the company, as it might be possible to reach numbers that are closer to the big leagues and attract major brands.

The whole sport ecosystem might benefit as well, as DFS has been linked to the increase of sports consumption by the users. Athletes can improve their personal brand to help sign endorsements, leagues and teams can show sponsors how their fan base is engaging.

### 2.2. Why

Sports that typically are not so popular in their markets (think sports outside the big leagues in the US - NFL, NBA, MLB, NHL and MLS - Canada - NHL, CFL, MLS - or and major european and brazilian football leagues) experience difficulty in getting their games broadcast, streamed or even get any media coverage, and that directly impacts its fan base who is unable to find unbiased, specialized information about their teams, interact with other fans and have fun. Additionally, sports lack a platform that can help them showcase their product and reach a wider audience.

### 2.3. How

- By developing a Fantasy Sports app, which uses gamification features targeted mainly to the 18-34 year-old demographic, the most coveted by leagues, brands and advertisers alike. It allows fans to create their teams or pick their favorite players and guess the results of upcoming matches.
- By providing in-depth coverage that helps fans stay up-to-date to their favorite teams and also make better decisions when choosing players and picking winners.
- By creating forums where fans can discuss, create polls and interact, spending more time on the platform.

## 2.4. Vision

For people who have the desire to connect to a larger community with shared interests and create a strong network to amplify their beloved sport while having fun in a unique way.

### 2.4.1. Long term vision

Empowers users and leagues by providing a place to exchange ideas and showcase their sport to a wider audience.

## 3. Feasibility Study

### 3.1. Total Addressable Market (TAM)

For the app's release, we will focus on the audiences for three sports that, according to the table below, have a large enough fanbase and practicants that would engage in the app. As they are all very different between them, it also allows to showcase the flexibility of the platform to support different sports.

Although Fantasy Sports are a well established concept and the intended audience is the already existing fanbase of selected sports, Connect Sports addresses a new market, as this potential user base is not currently supported by any solution.

In future updates, more sports could be added.

Sport	Estimated global fans (in millions)	Affiliated Nations	International Federation Revenue (in US\$ Millions)
Rugby	100	128 Nations	432*
Judo	200	200 Nations	30*
Crossfit	50	120 Nations	4,000
TOTAL	350		4,460

There are no public studies available about the total addressable market on judo and Rugby. Because these sports are public (they are not a brand nor belong to a specific company, as opposed to Crossfit) it is harder to measure the market value for them. However, we believe that the revenue of their governing bodies, as well as their global presence and number of registered players are a good indicator of the potential revenue around it.

## 3.2. Budget

### 3.2.1. Cost Considerations:

#### Hardware

- We consider that 1% of the estimated fanbase (3.5 million fans) will sign up to the app.
- Furthermore, 20% of the registered users (700 thousand) will be using the app regularly.
- At any given time, we expect that 20% of the regular users (140 thousand) will be logged in using the platform, reading news, picking their team and interacting on forums.

To support this amount of users without any bottlenecks or instability in the infrastructure we considered hiring Amazon EC2 for server and Amazon S3 for storage needs to support our application. It provides on demand services on the Amazon Cloud for both servers and storage needs.

Sporting events happen mostly during weekends, so a more robust solution will be required during this period. The setup we chose allows scalability during peak days and save resources during low demand periods.

**Configure Amazon EC2** Informações

▼ Mostrar cálculos

Análise de ponto de equilíbrio

A cost-optimized strategy for your utilization is found by calculating the breakeven point when Compute Savings Plans instances are more cost effective to use than On-Demand Instances.

A taxa de Compute Savings Plans para c5a.2xlarge no Canada (Central) para o período 3 Year e All Upfront é de 0.146 USD

Horas no compromisso: 365 days \* 24 hours \* 3 year = 26280.0000 hours

Compromisso total: 0.146 USD \* 26280 hours = 3836.8800 USD

Adiantado: All Upfront (100% of 3836.88) = 3836.8800 USD

Custo por hora para Compute Savings Plans = (Total Commitment - Upfront cost)/Hours in the term: (3836.88 - 3836.88)/26280 = 0.0000 USD

Preço mensal de Compute Savings Plans normalizado: (3836.880000 USD / 36 meses) + (0.000000 USD x 730 horas em um mês) = 106.580000 USD

Preço por hora para sob demanda: 0.336000 USD

Preço mensal normalizado para sob demanda: 0.336000 USD x 730 horas em um mês = 245.280000 USD

Porcentagem de ponto de equilíbrio: 106.580000 USD / 245.280000 USD = 0.4345238095238095238

Ponto de equilíbrio: 0.4345238095238095238 x 730 horas no mês = 317.202381 horas

Resumo da utilização

Para utilização de instâncias além do ponto de equilíbrio, 317.202381 horas, é mais econômico escolher Compute Savings Plans instances em vez de instâncias sob demanda. Visualizar um cálculo completo de suas [horas estimadas de carga de trabalho](#).

1 Compute Savings Plans instances x custo inicial de 3836.880000 = 3836.880000 USD

**Compute Savings Plans instances (adiantado): 3836.880000 USD**

1 Instâncias x 730 horas em um mês = 730 Compute Savings Plans instance horas por mês

730 Compute Savings Plans instance horas por mês x 0.000000 USD = 0.000000 USD

**Compute Savings Plans instances normalizado (mensal): 0.000000 USD**

938.5714 Horas de instância sob demanda por mês x 0.336000 USD = 315.359990 USD

**Sob demanda (mensal): 315.359990 USD**

315.359990 USD sob demanda (mensal) + 0.000000 USD Compute Savings Plans instances normalizado (mensal) = 315.359990 USD

Figures 1 and 2: Screenshots of AWS Calculator

## Software

- There is no need for any software licenses, as all the programming languages are open source and tools are already being used in the company's other projects.

## Development Schedule

The estimated project time was based on similar projects developed by the company in the past.

- The project will demand around 600 hours from each of the 10 team members to complete the project in 4 months. That will be in time for the beginning of the Rugby World Cup, which will take place in France, starting September 8th.
- Code maintenance will require 10% of the initial effort.
- The company's employees have all the technical expertise and tools to develop the Project.
- The team includes a project manager, junior and senior software developers, and a product owner, each one of them getting different salaries. For simplicity purposes, the hourly fees have been normalized to \$30/hour.

## Additional Costs

- Licenses to allow use of players names, images and likeness and team logos will cost around \$30,000.00 in the first 3 years, and grow to \$40,000.00 in the following years.
- To promote the platform on social media, podcasts and search ads, we are considering a \$50,000.00 budget per year.

## 3.2.2. Benefit Considerations

### 3.2.2.1. Tangible

The app will adopt the "freemium" model. That means that it will be free to download and use some basic functionalities, but additional features will be accessible through a subscription, and it will be ad supported.

Below, there is a comparison table of features in both models:

Features	Freemium	Paid
Read News/Comment	✓	✓
Join Tournaments	✓	✓
Access to forums	✓	✓
Create custom tournaments	✗	✓
Special content	✗	✓
Create topics/communities	✗	✓
Ad free	✗	✓

### Subscription

- The platform will have a monthly subscription plan which will cost \$4.99 per month.
- We expect that 5% of the regular users (35 thousand) will subscribe to get access to the premium features in the first year.
- As the platform gets traction, we expect to reach 75 thousand subscribers by the sixth year

### Ad Revenue

- Revenue from ads in-app and branded-content features will account for \$100,000.00 in the first year and ramp up to \$400,000.00 by the sixth year.

#### 3.2.2.2. Intangible

- Provide niche sports and athletes with a platform that will give them more visibility in the media and might help get sponsors
- Increased sense of community by the users
- Fidelity from the fanbase towards the company

## 3.3. ROI Analysis

The table below represents all the topics detailed above and from those numbers, we are able to find the break-even point and the ROI for the project.

Year	0	1	2	3	4	5	6
Costs	Year 0	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Amazon EC2 (Server)	\$ 3.836,88	\$ 3.836,88	\$ 3.836,88	\$ 5.674,67	\$ 5.674,67	\$ 5.674,67	\$ 5.674,67
Amazon S3 (Storage)	\$ 1.665,72	\$ 1.665,72	\$ 1.665,72	\$ 1.665,72	\$ 1.665,72	\$ 1.665,72	\$ 1.665,72
Development	\$ 720.000,00	\$ 72.000,00	\$ 72.000,00	\$ 72.000,00	\$ 72.000,00	\$ 72.000,00	\$ 72.000,00
License fees	\$ 30.000,00	\$ 30.000,00	\$ 30.000,00	\$ 40.000,00	\$ 40.000,00	\$ 40.000,00	\$ 40.000,00
Marketing	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00	\$ 50.000,00
Discount (12%)	\$ 1,0000	\$ 0,8929	\$ 0,7972	\$ 0,7118	\$ 0,6355	\$ 0,5674	\$ 0,5066
Time-adjusted costs	\$ 805.502,60	\$ 140.627,32	\$ 125.560,11	\$ 120.533,14	\$ 107.618,88	\$ 96.088,29	\$ 85.793,11
Cumulative time-adjusted costs	\$ 755.502,60	\$ 896.129,92	\$ 1.021.690,03	\$ 1.142.223,17	\$ 1.249.842,05	\$ 1.345.930,34	\$ 1.431.723,45
Benefits	Year 0	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Subscription (\$4.99)	\$ 174.650,00	\$ 199.600,00	\$ 224.550,00	\$ 249.500,00	\$ 274.450,00	\$ 324.350,00	\$ 374.250,00
Ad Revenue	\$ 100.000,00	\$ 120.000,00	\$ 140.000,00	\$ 180.000,00	\$ 250.000,00	\$ 300.000,00	\$ 400.000,00
Total Benefit	\$ 274.650,00	\$ 319.600,00	\$ 364.550,00	\$ 429.500,00	\$ 524.450,00	\$ 624.350,00	\$ 774.250,00
Discount (12%)	\$ 1,0000	\$ 0,8929	\$ 0,7972	\$ 0,7118	\$ 0,6355	\$ 0,5674	\$ 0,5066
Time-adjusted benefits	\$ 274.650,00	\$ 285.357,14	\$ 290.617,03	\$ 305.709,62	\$ 333.297,46	\$ 354.272,96	\$ 392.259,15
Cumulative time-adjusted benefits	\$ 274.650,00	\$ 560.007,14	\$ 850.624,17	\$ 1.156.333,79	\$ 1.489.631,24	\$ 1.843.904,20	\$ 2.236.163,35
Year	Year 0	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
NPV (Cumulative lifetime time-adjusted costs)	-\$480.852,60	-\$336.122,78	-\$171.065,86	\$14.110,61	\$239.789,19	\$497.973,86	\$804.439,90

For the costs and benefits perceived in the project, the Break-even point will be after 2 years and 9 months.

$$\text{Break-Even: } (-171,065.86) / ((14,110.61 + (-171,065.86))) = 0,92$$

$$\text{ROI: } (2,236,163.35 - 1,431,723.45) / 1,431,723.45 = 56,19\%$$

## 4. UML Diagrams

### 4.1. Scope

Although the present document describes a series of features on the app, for the purpose of the project, the UML and Agile planning chapters will focus on the main feature, which is the daily fantasy.

### 4.2. Use Cases

#### 4.2.1. Stakeholders

Actors	Description
System	The platform
SysAdmin	System manager
User	User who access only the basic functionalities
PaidUser	User who subscribes to the platform
Editor	News editor
Moderator	Manages the forums/comments
Writer	News Writer
